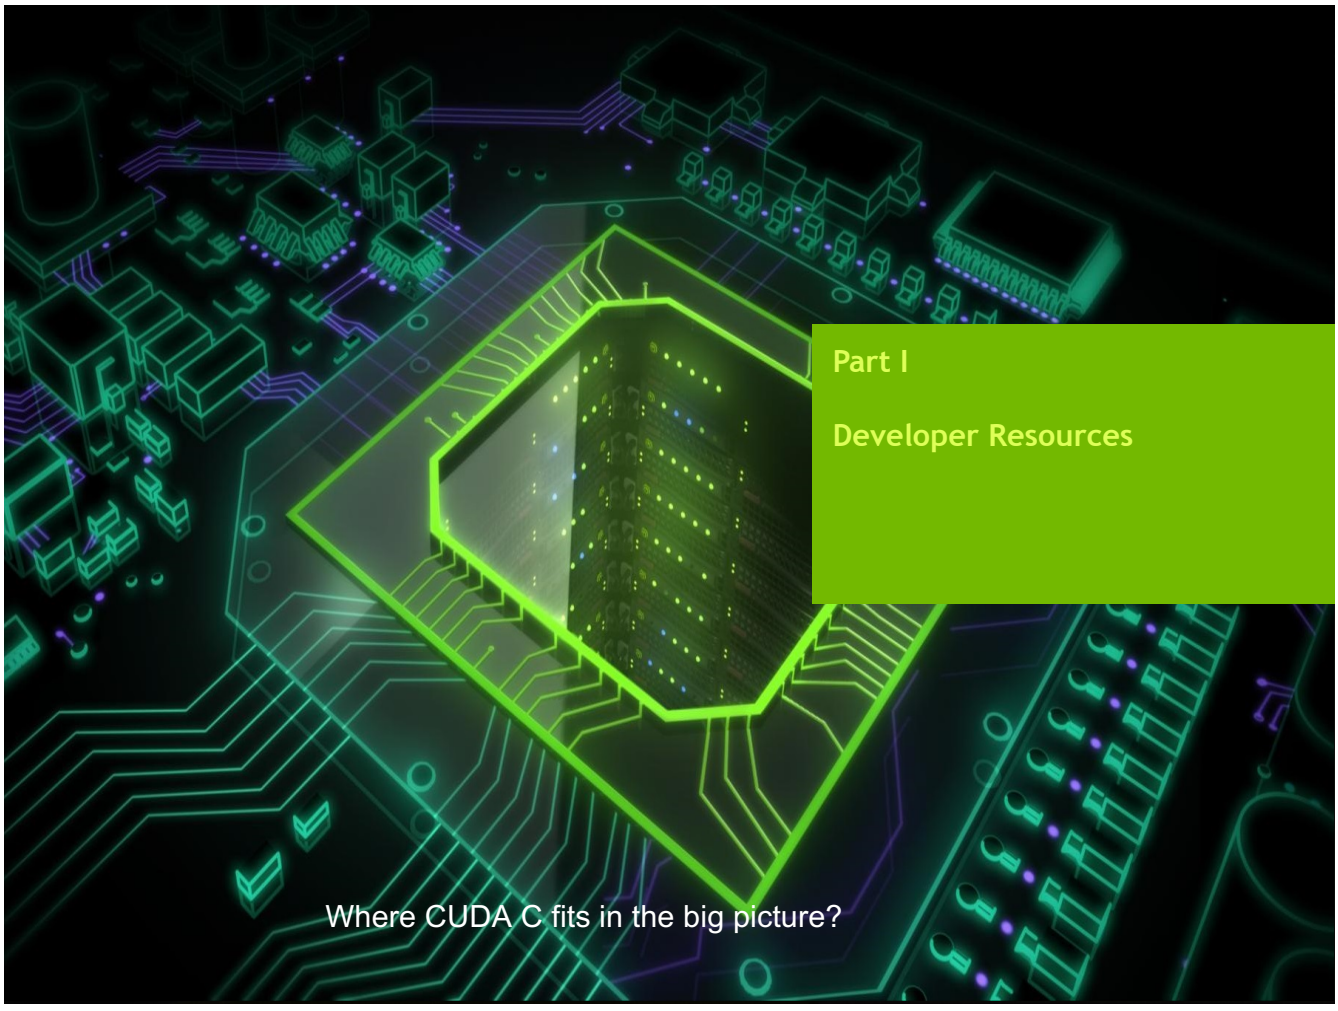
Lecture 12 – Introduction to CUDA C
Introduction to the CUDA Toolkit



Part I
Developer Resources
Where CUDA C fits in the big picture?

3 Ways to Accelerate Applications

Libraries	Compiler Directives	Programming Languages
Easy to use Most Performance	Easy to use Portable code	Most Performance Most Flexibility

Libraries: Easy, High-Quality Acceleration

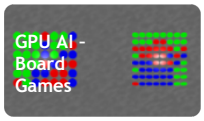
- **Ease of use:** Using libraries enables GPU acceleration without in-depth knowledge of GPU programming
- **"Drop-in":** Many GPU-accelerated libraries follow standard APIs, thus enabling acceleration with minimal code changes
- **Quality:** Libraries offer high-quality implementations of functions encountered in a broad range of applications

GPU Accelerated Libraries

Linear Algebra
FFT, BLAS,
SPARSE, Matrix

Numerical & Math
RAND, Statistics

Data Struct. & AI
Sort, Scan, Zero Sum



Visual Processing
Image & Video

NVIDIA
Video
Encode

Vector Addition in Thrust

```
thrust::device_vector<float> deviceInput1(inputLength);
thrust::device_vector<float> deviceInput2(inputLength);
thrust::device_vector<float> deviceOutput(inputLength);

thrust::copy(hostInput1, hostInput1 + inputLength, deviceInput1.begin());
thrust::copy(hostInput2, hostInput2 + inputLength, deviceInput2.begin());

thrust::transform(deviceInput1.begin(), deviceInput1.end(), deviceInput2.begin(),
                  deviceOutput.begin(), thrust::plus<float>());
```

Compiler Directives: Easy, Portable Acceleration

- **Ease of use:** Compiler takes care of details of parallelism management and data movement
- **Portable:** The code is generic, not specific to any type of hardware and can be deployed into multiple languages
- **Uncertain:** Performance of code can vary across compiler versions

OpenACC

– Compiler directives for C, C++, and FORTRAN

```
#pragma acc parallel loop
copyin(input1[0:inputLength],input2[0:inputLength]),
   copyout(output[0:inputLength])
    for(i = 0; i < inputLength; ++i) {
        output[i] = input1[i] + input2[i];
    }
```

Programming Languages: Most Performance and Flexible Acceleration

- **Performance:** Programmer has best control of parallelism and data movement
- **Flexible:** The computation does not need to fit into a limited set of library patterns or directive types
- **Verbose:** The programmer often needs to express more details

GPU Programming Languages

Numerical analytics	MATLAB Mathematica, LabVIEW
Fortran	CUDA Fortran
C	CUDA C
C++	CUDA C++
Python	PyCUDA, Copperhead, Numba
F#	Alea.cuBase

Part II
CUDA Resources and Toolkit

NVCC Compiler

- NVIDIA provides a CUDA-C compiler
  - nvcc
- NVCC compiles device code then forwards code on to the host compiler (e.g. g++)
- Can be used to compile & link host only applications

Example 1: Hello World

```
int main() {
    printf("Hello World!\n");
    return 0;
}
```

Instructions:
1. Build and run the hello world code
2. Modify Makefile to use nvcc instead of g++
3. Rebuild and run

CUDA Example 1: Hello World

```
__global__ void mykernel(void) {
}

int main(void) {
    mykernel<<<1,1>>>();
    printf("Hello World!\n");
    return 0;
}
```

Instructions:
1. Add kernel and kernel launch to main.cu
2. Try to build

CUDA Example 1: Build Considerations

- Build failed
  - Nvcc only parses .cu files for CUDA
- Fixes:
  - Rename main.cc to main.cu

  OR
  - nvcc –x cu
    - Treat all input files as .cu files

Instructions:
1. Rename main.cc to main.cu
2. Rebuild and Run

Hello World! with Device Code

```
__global__ void mykernel(void) {
}

int main(void) {
    mykernel<<<1,1>>>();
    printf("Hello World!\n");
    return 0;
}
```

Output:

```
$ nvcc main.cu
$ ./a.out
Hello World!
```

- `mykernel` (does nothing, somewhat anticlimactic!)

Developer Tools - Debuggers

https://developer.nvidia.com/debugging-solutions

Compiler Flags

- Remember there are two compilers being used
  - NVCC: Device code
  - Host Compiler: C/C++ code
- NVCC supports some host compiler flags
  - If flag is unsupported, use –Xcompiler to forward to host
    - e.g. –Xcompiler –fopenmp
- Debugging Flags
  - -g: Include host debugging symbols
  - -G: Include device debugging symbols
  - -lineinfo: Include line information with symbols

CUDA-MEMCHECK

- Memory debugging tool
  - No recompilation necessary

    %> cuda-memcheck ./exe
- Can detect the following errors
  - Memory leaks
  - Memory errors (OOB, misaligned access, illegal instruction, etc)
  - Race conditions
  - Illegal Barriers
  - Uninitialized Memory
- For line numbers use the following compiler flags:
  - -Xcompiler -rdynamic -lineinfo

http://docs.nvidia.com/cuda/cuda-memcheck

CUDA-MEMCHECK

– Try `cuda-memcheck`

Instructions:
1. Build & Run a source code
2. Run with cuda-memcheck
   %> cuda-memcheck ./a.out
3. Add nvcc flags "-Xcompiler -rdynamic -lineinfo"
4. Rebuild & Run with cuda-memcheck
5. Fix any illegal write that you may have

http://docs.nvidia.com/cuda/cuda-memcheck

CUDA-GDB

– cuda-gdb is an extension of GDB
  – Provides seamless debugging of CUDA and CPU code
– Works on Linux and Macintosh
  – For a Windows debugger use NSIGHT Visual Studio Edition

http://docs.nvidia.com/cuda/cuda-gdb

Example 3: cuda-gdb

Instructions:

1. Run the exercise in cuda-gdb
   %> cuda-gdb --args ./a.out
2. Run a few cuda-gdb commands:

```
(cuda-gdb) b main             //set break point at main
(cuda-gdb) r                      //run application
(cuda-gdb) l                      //print line context
(cuda-gdb) b foo                  //break at kernel foo
(cuda-gdb) c                      //continue
(cuda-gdb) cuda thread        //print current thread
(cuda-gdb) cuda thread 10     //switch to thread 10
(cuda-gdb) cuda block         //print current block
(cuda-gdb) cuda block 1       //switch to block 1
(cuda-gdb) d                      //delete all break points
(cuda-gdb) set cuda memcheck on    //turn on cuda memcheck
(cuda-gdb) r                      //run from the beginning
```

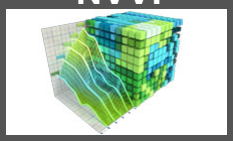
3. Fix Bug

http://docs.nvidia.com/cuda/cuda-gdb

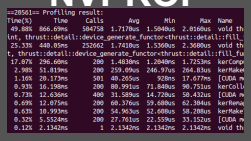
Developer Tools - Profilers

NSIGHT

NVVP

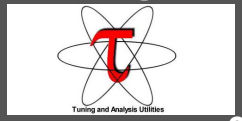


NVPROF



NVIDIA Provided

TAU



VampirTrace

3rd Party

https://developer.nvidia.com/performance-analysis-tools

NVPROF

Command Line Profiler

- Compute time in each kernel
- Compute memory transfer time
- Collect metrics and events
- Support complex process hierarchy's
- Collect profiles for NVIDIA Visual Profiler
- No need to recompile

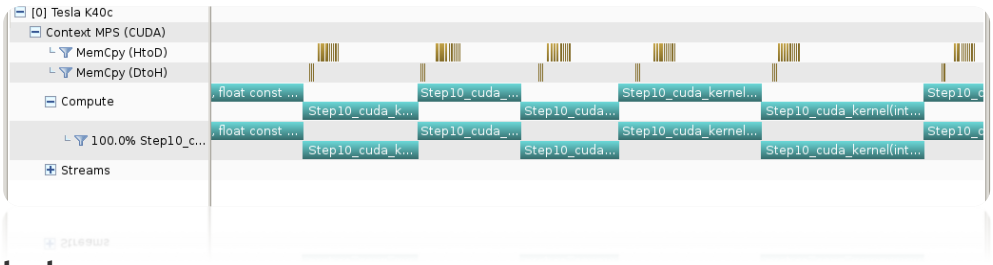
Example 4: nvprof

Instructions:

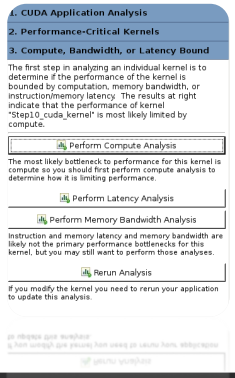
1. Collect profile information for the matrix add example
   %> nvprof ./a.out
2. How much faster is add_v2 than add_v1?
3. View available metrics
   %> nvprof --query-metrics
4. View global load/store efficiency
   %> nvprof --metrics gld_efficiency,gst_efficiency ./a.out
5. Store a timeline to load in NVVP
   %> nvprof -o profile.timeline ./a.out
6. Store analysis metrics to load in NVVP
   %> nvprof -o profile.metrics --analysis-metrics ./a.out

NVIDIA's Visual Profiler (NVVP)

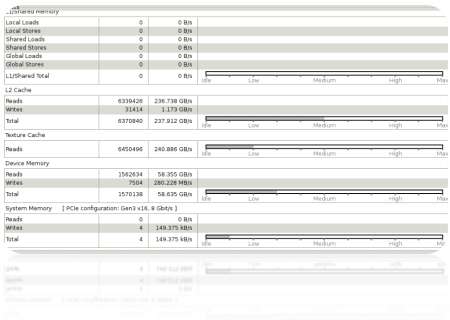
Timeline

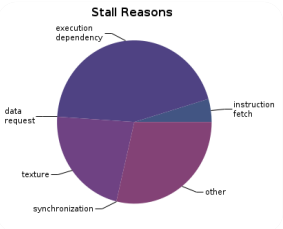


Guided System



Analysis





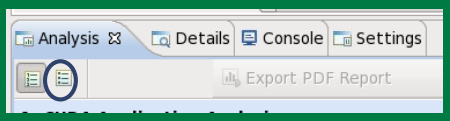
Example 4: NVVP

Instructions:

1. Import nvprof profile into NVVP
   - Launch nvvp
   - Click File/ Import/ Nvprof/ Next/ Single process/ Next / Browse
     - Select profile.timeline
   - Add Metrics to timeline
     - Click on 2nd Browse
     - Select profile.metrics
   - Click Finish
2. Explore Timeline
   - Control + mouse drag in timeline to zoom in
   - Control + mouse drag in measure bar (on top) to measure time

Example 4: NVVP

Instructions:
1. Click on a kernel
2. On Analysis tab click on the unguided analysis



2. Click Analyze All
   Explore metrics and properties
   What differences do you see between the two kernels?

Note:

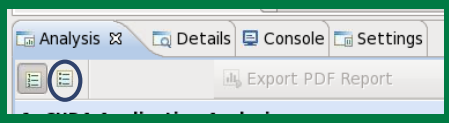
If kernel order is non-deterministic you can only load the timeline or the metrics but not both.

If you load just metrics the timeline looks odd but metrics are correct.

Example 4: NVVP

Let's now generate the same data within NVVP

1. Click File / New Session / Browse
   Select Example 4/a.out
   Click Next / Finish



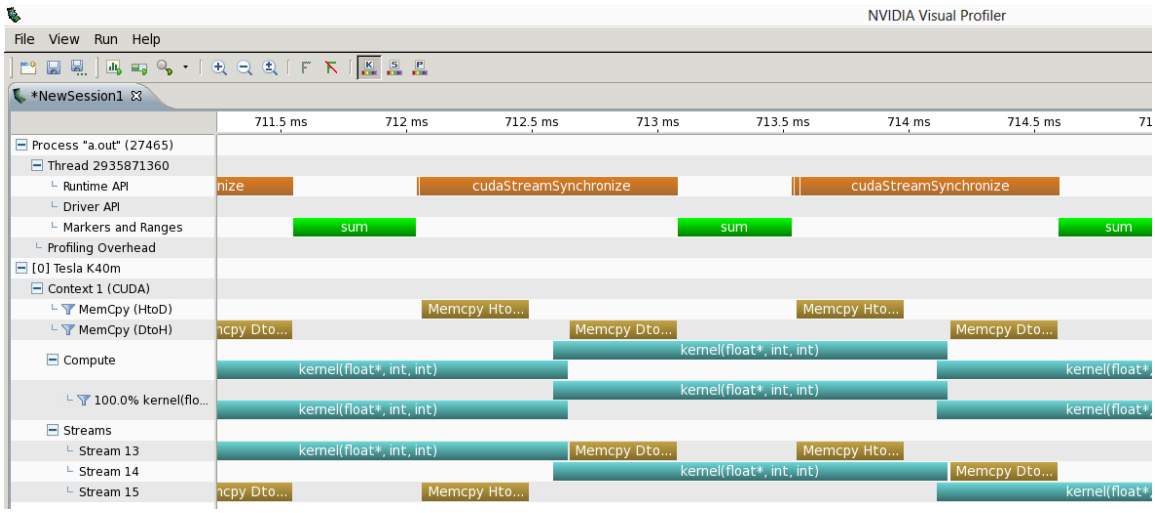
2. Click on a kernel
   Select Unguided Analysis
   Click Analyze All

NVTX

- Our current tools only profile API calls on the host
  - What if we want to understand better what the host is doing?
- The NVTX library allows us to annotate profiles with ranges
  - Add: #include <nvToolsExt.h>
  - Link with: -lnvToolsExt
- Mark the start of a range
  - nvtxRangePushA("description");
- Mark the end of a range
  - nvtxRangePop();
- Ranges are allowed to overlap

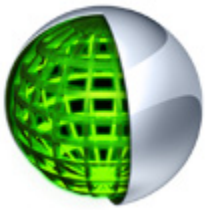
http://devblogs.nvidia.com/parallelforall/cuda-pro-tip-generate-custom-application-profile-timelines-nvtx/

NVTX Profile



NSIGHT

- CUDA enabled Integrated Development Environment
  - Source code editor: syntax highlighting, code refactoring, etc
  - Build Manger
  - Visual Debugger
  - Visual Profiler
- Linux/Macintosh
  - Editor = Eclipse
  - Debugger = cuda-gdb with a visual wrapper
  - Profiler = NVVP
- Windows
  - Integrates directly into Visual Studio
  - Profiler is NSIGHT VSE



Example 4: NSIGHT

Let's import an existing Makefile project into NSIGHT

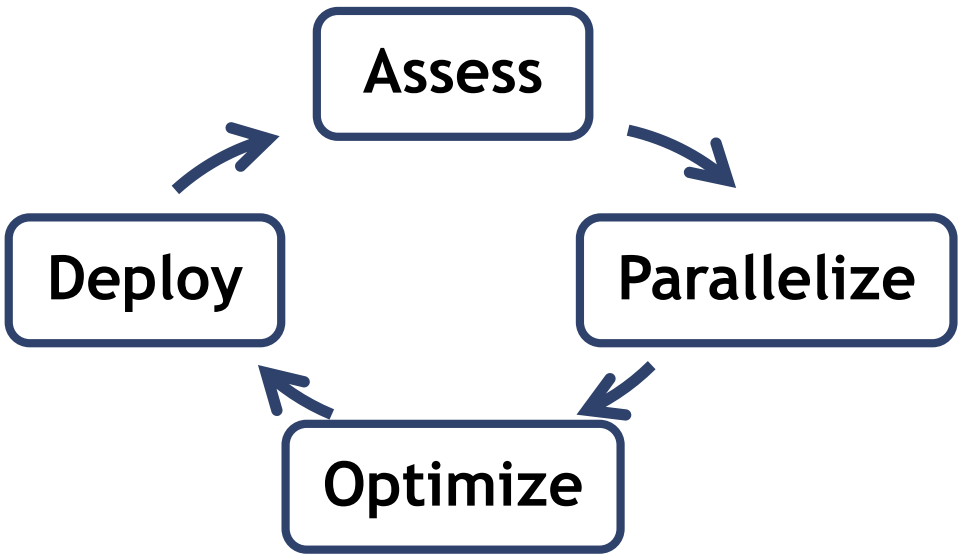
Instructions:

1. Run nsight and *select* default workspace
2. Click File / New / Makefile Project With Existing CodeTest
3. Enter Project Name and select the Example15 directory
4. Click Finish
5. Right Click On Project / Properties / Run Settings / New / C++ Application
6. Browse for Example 4/a.out
7. In Project Explorer double click on main.cu and explore source
8. Click on the build icon
9. Click on the run icon
10. Click on the profile icon

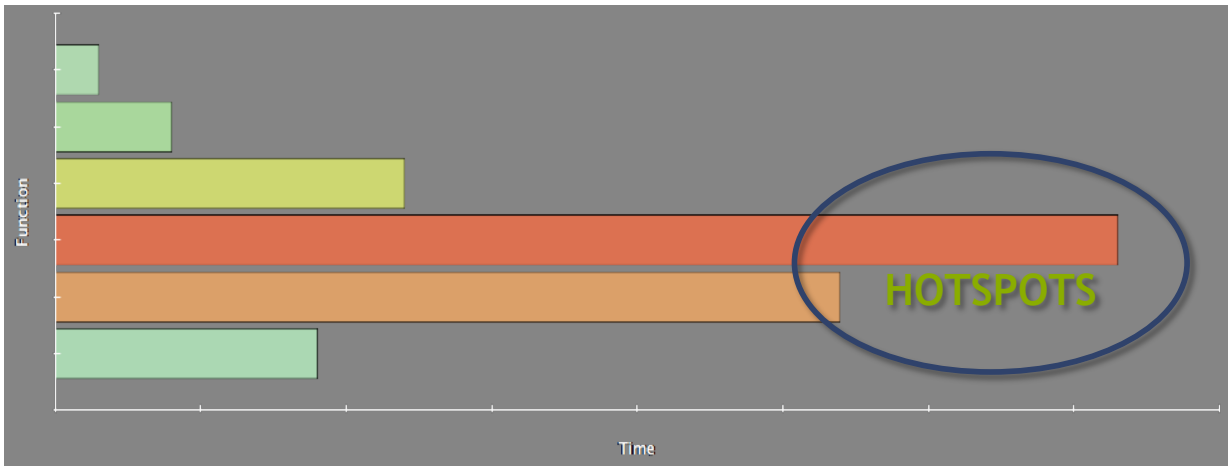
Profiler Summary

- Many profile tools are available
- NVIDIA Provided
  - NVPROF: Command Line
  - NVVP: Visual profiler
  - NSIGHT: IDE (Visual Studio and Eclipse)
- 3rd Party
  - TAU
  - VAMPIR

Optimization



Assess

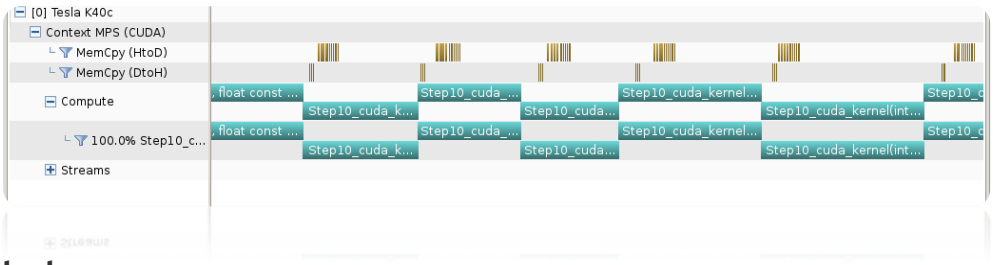


- Profile the code, find the hotspot(s)
- Focus your attention where it will give the most benefit

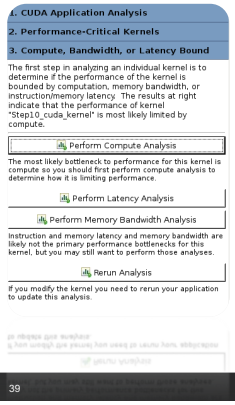
Parallelize

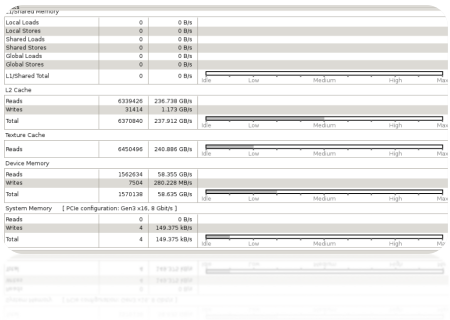
Optimize

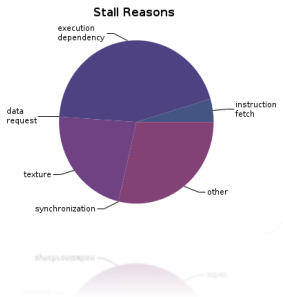
Timeline



Guided Analysis System







Bottleneck Analysis

- Don't assume an optimization was wrong
- Verify if it was wrong with the profiler

⚠ **Shared Memory Alignment and Access Pattern**

Memory bandwidth is used most efficiently when each shared memory load and store has proper alignment and access pattern.

Optimization: Select each entry below to open the source code to a shared load or store within the kernel with an inefficient alignment or access pattern. For each access pattern of the memory access.

▽ Line / File	main.cu - /home/jluitjens/code/CudaHandsOn/Example19
